

## Week10DiscussionCIT992026

March 15, 2026

```
[12]: import pandas as pd
import numpy as np
L = pd.Series([16366,          16014, 2600, 10500,          2741])
meanx = L.mean().item()
stdx = L.std().item()
print("coefficient of variation percentage", np.round(100 * stdx/meanx, 2))
```

coefficient of variation percentage 70.28

```
